Profile

Applied AI Engineer based in Vienna with strong backend foundations, focused on building and operating production-grade RAG and semantic search systems. Experienced in retrieval architecture, evaluation and guardrails, and integrating LLM-based capabilities into scalable backend services deployed with Docker and Kubernetes.

Experience

Selected AI & Search Systems — Vienna, Austria
AI Engineer — *Oct 2025 – Present*

- Designed and delivered applied AI systems including RAG-based search and conversational interfaces, owning architecture, implementation, and deployment end-to-end.
- Focused on retrieval quality, system reliability, and operational clarity rather than model training or research.

RISE — Vienna, Austria
Software Engineer (AI/Search) — *May 2025 – Sep 2025*

- Owned the AI-driven document search platform based on Retrieval-Augmented Generation (RAG) and LLMs.
- Designed scalable ingestion, chunking, embedding, and indexing pipelines for large document collections.
- Integrated Elasticsearch/OpenSearch as both document and vector store, tuning retrieval strategies for semantic relevance and performance.
- Operated AI components as part of a broader backend system within Dockerized and Kubernetes environments.

Kapsch — Vienna, Austria
Software Engineer — *Sep 2023 – Mar 2024*

- Improved reliability of backend systems through automation, performance measurement, and structured testing.
- Built tooling to analyze CPU and memory behavior, supporting performance investigations of production services.

Huawei — Budapest, Hungary
Software Engineer — *Aug 2021 – Aug 2023*

- Built backend automation tools integrating Python and Java services, later extended to support data-driven and search-related workflows.
- Led a team of engineers, coordinating priorities and reviewing implementations across backend services.
- Designed APIs and data models adaptable to evolving requirements.

Citibank — Budapest, Hungary
Software Engineer — *Jan 2019 – Aug 2021*

- Developed backend systems processing security and vulnerability data using Python, Java, and SQL.
- Designed data processing workflows supporting analysis and reporting at scale.

Technical Skills

AI & Search: Retrieval-Augmented Generation (RAG), semantic search, LangChain, LangGraph
Backend: Python, Java, FastAPI, Django, REST APIs
Data & Retrieval: Elasticsearch/OpenSearch, embeddings, chunking strategies, SQL
Cloud & Ops: Docker, Kubernetes, AWS, Linux
Other: Git

Languages

German: Professional working proficiency (B2, C1 in progress)
English: Full professional proficiency, daily working language in technical environments
Greek: Native
Chinese: Upper-intermediate (used in professional context)

Projects

Agentic RAG System | *Python, LangGraph, LangChain*

- Designed an agentic RAG system with explicit control flow, tool routing, and retrieval orchestration.
- Implemented evaluation, retries, and guardrails to improve answer quality and operational predictability.

End-to-End RAG Pipeline | *Python, Elasticsearch/OpenSearch, Streamlit*

- Built a complete ingestion and retrieval pipeline including crawling, chunking, embedding, and indexing.
- Shipped a Streamlit-based conversational UI with citations, logging, and environment-based configuration.

Education

University of Macedonia — Thessaloniki, Greece

BSc in Applied Information Technology — *2014 – 2018*
